

# EQUA DIFF

$$y' = f$$

PRIMITIVE

$$y(x) = F(x) + k$$

$k \in \mathbb{R}$

$$y' = ay$$

$$y(x) = C e^{ax}$$

$C \in \mathbb{R}$

$$y' = ay + b$$

$$y(x) = C e^{ax} - \frac{b}{a}$$

$C \in \mathbb{R}$

## PRIMITIVES

$$x^m \rightarrow \frac{x^{m+1}}{m+1}$$

$$\frac{1}{x^m} \rightarrow -\frac{1}{(m-1)x^{m-1}}$$

$$\frac{1}{\sqrt{x}} \rightarrow 2\sqrt{x}$$

$$e^x \rightarrow e^x$$

$$\frac{1}{x} \rightarrow \ln|x|$$

$$\begin{aligned} \cos(x) &\rightarrow \sin(x) \\ \sin(x) &\rightarrow -\cos(x) \end{aligned}$$

$$u^m \times u' \rightarrow \frac{u^{m+1}}{m+1}$$

$$\frac{u'}{u^n} \rightarrow -\frac{1}{(n-1)u^{n-1}}$$

$$\frac{u'}{\sqrt{u}} \rightarrow 2\sqrt{u}$$

$$e^u \times u' \rightarrow e^u$$

$$\frac{u'}{u} \rightarrow \ln|u|$$

$$\begin{aligned} \cos(u) \times u' &\rightarrow \sin(u) \\ \sin(u) \times u' &\rightarrow -\cos(u) \end{aligned}$$

$$y' = ay + f$$

$$y(x) = C e^{ax} + g(x)$$

$C \in \mathbb{R}$

avec  $g$  une solution particulière
